PROJECTS

Student Management System — *React.js + Firebase*

A Student management system is a website that is built in react.js and all data is stored in Firebase This website contains 4 pages (ADD, Delete, update, React) and also marks attendance and shows the graph of attendance

CRUD-App — *React.js + Firebase*

This Crud can Create, React, update, and delete Data, and Authentication is Added to this project to keep each user Save data separately.

Number To Words — *JavaScript*

When I completely Learned JavaScript I created this project to see where I am standing in javaScript and logic building. because this project is full of logic because he can convert numbers into words, it converts 1

SKILLS

HTML,
CSS,
JavaScript,
React.js,
Next.js,

LANGUAGES

English, Urdu, Punjabi

to 10^{12}

My Portfolio Website — *Next.js*

My Portfolio Website is for showing my projects and my services for freelancing. I created this website in Next.js because Next.js is the future because of their (Server Side Rendering is very helpful for SEO) and easy routing system and it includes full stack development on one folder and and Sever and client-side components and many more.

Scientific Calculator — *javaScript.js*

Scientific Calculator is also a very good project because it helped me to understand how events work in JavaScript and how JavaScript Math objects help us to solve maths problems very easily.

8 Figma convert Design (6 Full Responsive) — *Html, CSS*

While learning HTML CSS I converted so many designs to sharp and learned how designing is also very crucial for a better user experience. Now this effort will help me to solve design problems and help change any CSS code of my desires
